

MEDPRINT 2007

Technological preview
Milan, 20 February 2007

*Centrexpo has compiled a first exhibitors
product information report for the international press.
This collection is based exclusively on press releases provided
by the exhibiting companies arranged alphabetically*

ASSOGRAFICI AT MEDPRINT 2007

Assografici is the Italian Association of Printing and Paper Converting Industries. It is member of CONFINDUSTRIA, the Italian Confederation of Employers, INTERGRAF (the International Confederation for Printing and Allied industries) and CITPA (International Confederation of paper and board Converters in Europe).

Assografici's main aims are to provide member printing companies assistance, information and consultancy on a wide range of issues and aspects such as environmental, economic, labour, fiscal subjects and on initiatives in the education and training field.

ATICA SPA

STITCHER HEADS AND STITCHER MACHINES

ATICA Spa–Cologno M.se/Mi—is the sole agency, for the Italian Market, of Stitcher Heads and Stitcher Machines, for the Company **DeLuxe/Bostitch-Chicago-USA**. Our Company is very pleased to introduce in **advance news for the Italian Market** the last products at completion of the vast range of goods in answer to the various request of the Clients: **Stitcher Head G5 for lower thickness** and **Stitcher Machine M30 for higher thickness**.

The Stitcher Head **G5** has a very compact design, easy to use, from its front-locking mount system, to its latchless construction and side-feed operation. That Stitcher meet the request of the Clients, needing a **smaller capacity—from 2 sheets to 5 mm (13/64")**—and it don't renounce to the high qualitative standard. It's possible to have the kit for loop staple.

Customers around the world have demanded a Stitcher that can do all. We are proudly introducing the powerful **M30** Machine with the innovative Head Mod. G30. **Stitching a sustained 1-1/4" (32 mm)** capacity through standard stock, flat, saddle or corner stitched. The M30 even stab stitches up to 2 inches! Wire size used from 25 gauge round to 18x20 gauge flat. Control compression and wire draw with a single adjustment.

In the wide range there are also the Stitcher **G8** thickness of 8 mm, **G20** thickness 20 mm, **DB75, DB75V** and **DB75V Loop 6 mm** used on the Muller Martini machine, and also **18D** and **26D** the most common heads in the world with the **swivel-style**.

Our range include also the Stitcher Machine with a Single Head **M2, M7 and M19** and the one with the Multi-Head **M17** and **M27** used for the large capacity of stitchers. And also the machine for special application **StitchMaster** and **MiniStitcher** ideal for the smaller print shop.

DeLuxe/Bostitch is able to supply the largest inventory of quality **replacement parts** for **Acme/Champion, Bostitch, Hohner, Interlake, Magnatek and Muller-Martini**, with a report quality/price extremely advantageous with as assistance in line with the reliability on the certificate products.

BONACINA '86 SRL

STAMP SYSTEM DIGISTAMP SC 2000

Bonacina '86 is exclusive distributor in Italy for stamp system DIGISTAMP SC 2000. This exclusive commercial system creates a major profit center by turning signatures, graphics, text, clip art, photos and logos into pre-inked stamps while your customers wait!

Everyone knows that stamps help people get through practically every job faster and easier, but no one ever plans ahead to buy a stamp. When your customers need one though, they need it now. And now you can give it to them while they wait!

It's just that fast and simple thanks to the DIGISTAMP SC2000 with this innovative system, virtually anything you can put on a computer monitor, you can put on a custom designed, professional pre-inked stamp. Text, graphics, signatures, logos, clip art, photos with DIGISTAMP's proprietary 600 dpi technology, anything is possible and everything is reproducible.

The DIGISTAMP SC2000 is an ideal bonus profit opportunity for anyone in printing, stationery, mailing, copying, office equipment or other stamp-related businesses. And best of all, your virtually risk-free investment in a DIGISTAMP can actually be recouped after only about 200 stamp sales. After that, everything will be clear profit. The Brother DIGISTAMP SC2000 is a totally new way to make stamps and profit!

CARTES SRL

INGLESE

CARTES WILL BE PRESENTING SOME OF THE MOST INNOVATIVE MACHINE FOR THE LABEL PRODUCTION, SUCH AS:

- **LASER 350** machine for label cutting, die-cutting, kiss cutting and engraving on web. Thanks to its double source it can reach up to **60 meters per minute** of web speed. Our machines are computer operated offering very high performance. They are entirely tool free, user friendly and with minimal maintenance costs.

- The model **CE152FE** is a compact and flexible machine for the label production. It can be configured with more than 20 different devices for the production of many kinds of labels, visiting cards, hang tags, ribbons, etc.

This machine enables to make different types of elaborations, such as:

Hot Stamping, overprinting, numbering, hologram application, longitudinal slitting, lamination, traditional die cutting, Laser die-cutting, cut, kiss-cut, single or double punching, scoring, embossing.

- Four colour digital printing machine for labels on web mod. **D-JET**, ideal for high quality label production.

- Manual hot printing press mod. PCM 150x300 to print many dimensions of publicity bags.

Cartes also manufactures silk screen printing, cutting, hang tag knotting, sheeting and Flexo varnishing machines

BINDING THE FUTURE

The Spiral Division of Cartiere Paolo Pigna S.p.A. (formerly, Rilecart srl) is one of the four divisions of the historical company which has been the undisputed leader for over a century in the school and office sectors. The company is located near Bergamo in the north of Italy. The Spiral Division, differently from the 3 others involved in paper and stationery, is a mechanical department supplying the professional book-binderies, the converting industry and the offices.

It manufactures punching and binding machines, double-loop wire in spools, cut-to-size in boxes and calendar hangers.

Since 1960 it has achieved a world leadership in this sector and it is widely acknowledged as the most reliable and advanced company in the binding business.

Its target is the promotion of this specific binding system, worldwide considered as an efficient and fashionable tool, as well as cheap and environmental friendly, that gives a stronger visual impact to the finished paper product.

In order to win the competitive challenge, we design and manufacture first class products and services, using a varied and multi-cultural know-how.

The continuous tension towards the satisfaction of our customers (who are considered partners, as a matter of fact) is a must for our Division.

The company has achieved the Quality Certification ISO 9001 : 2000. Nevertheless, we deem necessary a never-ending improvement of our quality.

We dedicate high attention inside our Division to increase our efficiency and this reflects outside in a higher efficacy of printed communications of our valued clients.

We specialize just in binding, increasing quality to our products and to our customers' products.

We design and manufacture machines that are flexible, easy to use and productive also with custom-tailored solutions that are economically valuable.

DIGRAPH SPA

A WIND RANGE OF DIGITAL PRINT SOLUTIONS

On a booth of 200 sqm, Digraph will showcase the most updated digital print solutions: from new Presstek DI, chemistry-free CTP systems to Xerox digital printing systems.

The new Presstek 52DI and 34DI are extremely automated and easy to use offset presses with direct imaging, which eliminate CTP and processor. They image the four ProFire Digital Media colour plates simultaneously. The system supports 120 l/cm and stochastic screening, producing the lowest cost per sheet at run length of 250 to 10.000 impressions. The DI's time saving features and faster drying time of waterless ink enable the fast turnaround of high quality print jobs – including same day service. File to sellable sheet is achieved in 10 minutes. The Presstek 52DI addresses the short run 35 x 50 cm market. The 52DI operates at a maximum speed of 10.000 B3 pages per hour and will display an inline UV oven, delivering gloss and shining effect even on less valuable media and on plastics. The Presstek 34DI is based on A3 portrait format and produces 7.000 A3 sheets per hour. It is suitable to be installed side by side to other digital and offset machines for small format jobs. It is also the ideal machine for digital shops, thus being able to reach the offset quality, even without having expert operators.

Presstek CTP's are founded on chemistry-free thermal laser technology. The Presstek Dimension425 Excel CTP displays a 4-up format and produce up to 11 plates/hour. It is suitable for production of high quality plates to be used for any kind of offset, commercial, poster, packaging and labels printing.

ProXFLOW, the PDF based workflow, developed by Digraph, will drive Presstek DI and CTP, delivering increased throughput.

To complete the offer there will be the Bourg BST10 and BB 3002 finishing systems together with Xerox digital printing systems.

DUPLO ITALIA s.r.l.

NEWS FROM THE FINISHING PRINT MARKET

Established in 2005, Duplo Italia is the latest company in the European commercial circuit, founded by Duplo International, that in thirty years, starting from London, has gradually captured the most important market (France, Germany, Poland and Russia).

Duplo Italia was born with the objective to become a point of reference, unique and effective, for its own customers (however looked after, until now, by a network of qualified resellers) and for the development services always more oriented to the customers satisfaction. Moreover the phase of research and definition of the solutions suggested to the customer and the assistance post-sale, are the central part of the activity.

In the main office in Arcore (MI) there is a set up show room always updated and complete, where it's possible to see and test the quality of Duplo's products, based on the finishing of the offset print and also on the innovative and continuous evolution of the digital print.

The sales team of Duplo Italia, competent and careful at the productive requirements of the customers, is able to supply precise and detailed information on the functionality of collators, folders, finishing line, binder, duplicators, cutters/creaser and cutters. The distinctive character of Duplo style is the ability to comprehend all customers requirements and to supply top solutions that realises to the best their expectations.

We don't limit ourselves to supply only machineries, but we suggest the customer complete solutions to give at his production a distinctive imprint, with evident comparisons from the quality and profit point of view.

ERREPI SNC DI ROSSI ROBERTO

TITLE: MACHINE FOR PRINTING REVISION AND DIE-CUTTING WITH NO STOP
REWINDER, WITHOUT GLUE.

The requirement of advanced productions, low printings and higher quality of the finished product, have induced the staff of “Errepi” Company to plan and to realize a complete machine, that allows both the printing revision and die-cut with fast and economic change of size. Thanks to the equipment’s accessories the machine can make the printing revision with unit for hot print or cold foil unit. At the end of the line, through the new “Speedy Rewinder” with or without glue, is possibile to realize high quality product distinguished by reliability, flexibility, productivity: these characteristics, with seriousness and availability are the trademark of our Company.

FLEXO ITALIA SRL

*PREPRESS : THE IMPORTANCE OF DIGITAL ENGRAVING IN FLEXOGRAPHIC PLATES
SETTING*

For many years flexo print has always been considered as a “poor sister” of rotogravure.

During the last years instead, we have seen a new emerging tendency: while in rotocalco technology and equipment were substantially the same , in flexo, evolutive processes were developed up to let the product quality comparable to that one of roto.

Nowadays flexo becomes popular and leader in press markets for food flexo packaging, labels, plastic or paper shoppers and corrugated paper.

The production of plates is fundamental to achieve the highest press quality.

Even though “*Flexo Italia*” is an emerging young firm it seems to be a ten years experience industry always specialized in the production of flexo analog and digital press plates and at 2007 MedPrint exhibition it’s going to present its second CTP Kodak Termoflex.

By it old and new costumer will be offered the chance to carry out very high quality digital plates with mixed screen, special point and screened color test.

During the exhibition all the printers will be invited to check the difference between high quality plates and traditional ones even for solid works, giving them a first complimentary trial supply.

GIARDINA OFFICINE AEROMECCANICHE SPA

THE “TAILOR-MADE” DRYING

Giardina Officine Aeromeccaniche SpA has been operating for more than 25 years in the Graphic Art field by designing and manufacturing varnishing and drying equipments inside its own plants for printing and varnishing processes on paper, board, pasted matters, plastics, metal and special materials.

The range of installations offered by the Giardina Graphic Division includes UV, IR and HOT AIR equipments for the following application fields: sheet and web printing, digital printing, electronics, automotive, objects and special treatments.

Since many years Giardina has been carefully following the continuous evolutions in the printing as well as varnishing sectors and is nowadays able to offer reliable systems at the forefront of technology with respect for the rules in force.

The “UV PLUS” system is the concrete answer for printing on thermosensitive materials with no damages for substrate, monitoring the whole process.

The “UV PLUS” system includes:

New DMQ series GST/UV module provided with double dichroic system to cut down the infrared energy on substrate, mixed air-fluid cooling, power up to 200 W/cm and arrangement to operate under reduced oxygen conditions.

Electronic feeder able to commute and rectify the mains current and take it to required values for an optimal working of UV lamps.

Contrary to a normal transformer, an electronic feeder has got a far higher electrical power (up to +35%), so it enables a considerable energy saving.

UV SENSOR system, thanks to which it is possible to steplessly monitor the UV radiation power emitted by lamps and constantly check the curing process.

GRAFCO SRL

PASSION & INNOVATION IN SCREEN PRINTING

Solvent based and UV Screen printing inks

The GRAFCO lines of solvent based screen printing inks are distinguished by its highly innovative and advanced technical characteristics resulting from the particular attention our skilled chemists pay to satisfying customer and industry demands .

Our investments in the research sector are geared to reaching high quality standards with a low environmental impact and all our lines are heavy metal free and with low odour formulations.

Our efforts are also aimed at developing new technology and materials for screen printing often as a result of specific customer requests, in order to obtain new aesthetic finishes in printing and innovative finished products.

Textile printing inks and Garment decoration specialties

Grafco people are very specialized in studying and developing innovative screen printing inks for, garment printing and industrial textile printing.

We have been co-operating with the most popular Italian fashion designers for many years, in order to develop textile screen printing inks and garment-decoration specialties in our laboratory that are capable of producing all those particular effects and dressings on fabrics and finished garments .

Our close co-operation with the most famous Italian fashion designers has enabled us to formulate products with extremely particular and "new" characteristics, which give highly original "effects" and finishes well known in the "made in Italy " production.

Heat transfer inks and specialties

Grafco manufacture an interesting range of heat transfer ink lines for dark garments application.

We are specialized in high opacity and high performances formulations to obtain top quality results on dark fabrics.

Photoemulsions and chemical specialties

Grafco manufacture a wide range of photoemulsion and chemical specialties for screens production and frame reclaiming.

HENKEL LOCTITE ADESIVI SRL

TITLE: ADHESIVE TECHNOLOGY FOR THE GRAPHIC INDUSTRY

The Henkel Group, with more than 56.000 employees producing in more than 75 countries around the world about 10.000 products, achieved in 2006 a total turnover of 12,74 billions Euro, while Henkel Technologies' sales were of 3,53 **billions** Euro.

Henkel Technologies is a world leader in the production of industrial adhesives and sealants and in surface treatment. The industrial sectors where the competences of Henkel products can be found are the following: transports, electronics, metallurgical industry, durable and consumer goods, packaging.

During Medprint exhibition Henkel will show the whole range of its adhesives for the graphic industry, adhesives specifically studied for all paper types, printing inks and for the most different films and other materials for books. Our complete portfolio includes a range of adhesives specific for all needs.

Our products meet in all points the most rigorous requirements: very high quality of products combined with excellent performances.

A competent consulting and a complete assistance service complete this offer. Our customers receive tailor-made system solutions to their problems. Therefore we develop an intense co-operation with publishing firms and industrial partners. Our experts study with the leading manufactures of machines and materials the best solution for the customer, from the chemical, technical and economic point of view – starting from the adhesive and from its application, in order to improve the production process.

Henkel products for bonding in the graphic industry:

Adhesin

High quality adhesives for a perfect bonding

Technomelt

High quality hot melt adhesives for the bonding of books spines

Disp-O-Fusion

Combined system of dispersions and hot melts for the bonding of books spines

Purmelt

Hot melt reactive polyurethane-based adhesives for the bonding of the spine, offering the following characteristics: excellent adhesion and cohesion, high aging resistance, high residue oil, cold and warm resistance.

KERN SPA

KERN, THE WRAPPING MACHINES PARTNER

Kern SPA, Italian subsidiary of Kern AG, Swiss company working in the last 50 years in the design and the production of precision systems for inserting, wrapping and finishing, is the distributor in Italy for all the solutions developed by Kern and dedicated to the market of the Document Output Management.

During MEDPRINT Kern will introduce in a new configuration three wrapping machines: the entry level equipment K40-6, dedicated to people looking for a good quality but without need of high speed; the system K40-15, both with high quality and high productivity; the system MPK used to wrap products by using folded film.

In addition to the standard features of the machines will be interesting to look the use of the absolutely new mobile feeders, installed on trolleys, able to modify the configuration of the equipment only changing the relative position of the feeders when the customer requests change, without modifying the existing modules and without the need of using trained technicians. The flexibility of use is the main feature of these products, which are very versatile and allow to maximize the return on investment.

It is important to remember that all these equipments are produced in Italy, to confirm the Kern appreciation for the experience and the creativity of the Italian partners.

PRESS RELEASE

KRUSE SRL

INNOVATIVE LINE OF PRODUCTS AND SERVICES FOR INLINE COATING

KRUSE SRL will show the well-know VARNILINE products for in line coating now introducing as premiere the compressible VARNIPLATE 195 (plate thickness 1,95 mm same as conventional offset blankets).

BRAVO the new calibrated underblanket for offset blankets is made by polyurethane and will be showed as world premiere; the product will be available in different thickness and is designed to obtain the best printing result.

VARNIPLATE UNIVERSAL GREEN, perfect for W.B.(Acrylic) and UV coatings, is the well-known transparent plate, made by a polyester base and NOW by a dual layer of Polyurethane and by a sliding top layer for an easier cut action manual or by plotter, this top layer is protected by a thin polypropylene film.

The dual layer permit a very easy cut and strip, a better coating release, to minimize the possibility of the ink build up effect, and a very high chemical and mechanical resistance, obtaining very long runs and reruns.

VARNIPLATE UNIVERSAL is available now in three thicknesses 1.15 mm, 1.35 and 1.95 mm this last type has a compressible layer included.

The best solution for high quality in coating is compulsory the link of VARNIPLATE UNIVERSAL with the underplate VARNICOMP PLUS.

VARNICOMP PLUS 40° Shore A hardness is the underplate/underblanket with very high compressibility, resilience, very long life and is marketed in 1.00-1.30-1.50 and 2.10 mm thickness both adhesive and no adhesive,

With VARNILINE products the results are less printing pressure, the best results in coating, less noise due to minor cylinder vibrations and higher printing speed.

The well known fast and competitive Kruse plotter services in Italy and many local services in other countries, for plate spots or stencil formats preparation give a real good help to the printers for better results in coating in line.

LUXORO: DYNAMIC EVOLUTION

Sometimes evolution is not enough, specially when the process of growth is happening in a fortification scene. In this case it's necessary to be in the lead of changes for the better, collecting innovation signals when they are perceivable, being one step ahead of others in the technical and production fields.

This is the leader role that Luxoro has been since it was born in the 1968: to be a symbol of superior quality, refined taste, improvement of stamping with sophisticated value effects. For this reason We are still the reseller and agent for Kurz company in Italy!

Kurz is the leader of the hot stamping in all the world.

Machines ,Brass and silicone dies, but above all foils, for hot stamping, for the improvement of the paper, plastic, textile, wood and metal, Always with technological instinct and with excellent results because it should also please the eye.

Here in Italy thinking about Luxoro brings to mind holograms, which for many is automatic, those iridescent labels, the best in the security field, the same used by the Central European Banking for the Euro money, and also from the illegal imitation of brand names.

To obtain excellent results : this is the reality that Luxoro to obtain and this in indeed.

The reality that we intend following, and sharing with the highest number of clients, actual and potential, in the field of fashion, such as in the graphic sector, the wood and furniture sector, and in that of plastic materials.

With hot stamping the product is rendered more aesthetically valuable, with silver and gold, as our name promises "Luxoro – luxury and gold".

MARKET SCREENTYPOGRAPHIC S.r.l.

IF THERE'S NO PLACE FOR THINGS OF BIG DIMENSIONS THERE'S PLACE FOR "BIG THINGS"

The Market Screentypographic S.r.l. was founded by the Selis family in 1989. We started reselling machines and materials for screenprinting and went to gain more and more technical and commercial experience. Thanks to our technical knowledge in the graphic sector, many clients of us went to grow with us in a very short time.

At that time it became necessary to increase our offer of promotional and textile articles, also because of our clients' needs and we started important and direct co-operations with *Fruit of the Loom*, *Mantis* and *B&C*.

It became essential for us to get specialized in every aspect of the graphic sector and this fact made us possible to get out of the Sardinian borders.

The Italian graphic market has got transformed with the arrival of directly printed products from Far East for medium and big requests and the national graphics factories have started to receive many small orders for different typologies of products: clients buy only what they are going to sell. Our experience has made us possible to face this transformation without any problem and we have become not only potential suppliers but also specialized consultants.

Nowadays we also produce and transform machines for small places that can print all the articles of the promotional and advertising world with the minimum investment. In this way our clients can face the new market requests.

At the *Medprint 2007* we are going to introduce our products:

- *Big Things*, the Gamax system that can make keychains with digital prints capped in transparent acrylic and particular forms.
- The *Easy Screen* system, a small screenprinting machine to print on t-shirts, hats, umbrellas, jackets, pockets, sleeves, agendas, calendars and many other things.
- *Pony Express*, 2 in 1, 4 colours, oven, to print with plastisol ink on t-shirts.
- *Tampromo*, manual tampographic machine to print on pens and advertising gadgets.

MEMO SRL

TECHNOLOGIES TO PRINT EVERYTHING ON EVERYTHING! EVEN JUST ONE!

During MEDPRINT 2007 Memo proudly presents:

TheMagicTouch, the world's leading Transfer Printing System for Colour Laser Copiers and Printers. TMT8600, Color laser printer modified for all TheMagicTouch transfer medias. MemoPressa, pneumatic thermal heat press to transfer all images on almost any kind of substrates.

The MagiCut system is for printing coloured text, logos and freeform designs onto dark garments, fabrics, and promotional items. MagiCut makes short run production easy and profitable. Full colour image transfers are possible using OBM 5.5 transfer paper from TheMagicTouch. Using the plotter in conjunction with the MagiCut software, the images can be precisely cut, weeded and pressed.

Azon Micro 3-D Digital Flatbed Printing System, digital image can be printed on various materials such as 10 cm thickness, metals, crystal, ceramic, wood, acrylic, form board, etc.

SubliJet sublimation ink systems that offer the total sublimation ink delivery system to create sublimated transfers on demand.

Memo is proud to present the revolutionary transfer product Weddless Wonder to print on dark garments without using a cutting device. After 5 years of R&D TheMagicTouch creates a product able to transfer full color image on dark garments just in 1 minute without print and cut system with the full color laser device image quality. TheMagicTouch one for all, all for one!

ROLAND DG MID EUROPE SRL

ROLAND: GREAT DEAL OF SOLUTIONS AND A PREVIEW FOR DIGITAL PRINTING

Roland DG Mid Europe S.R.L. shows a preview of a new solution for digital printing at Medprint 2007. The new products, displayed at Roland booth, will work unceasingly and available to the visitors.

All Roland line-up solutions will be also shown at the booth:

Print & Cut machines: VersaCamm and PROIII XC-540.

SP-300V and SP-540V, available in 76cm and 134 cm each, are fitted with a cutting device allowing to print and cut adhesives and labels in one integrated solution.

XC-540 is a large format print&cut machine with an impressive max print speed of 40 sqm./h. for high volume production. Ideal for a variety of applications including posters, banners, flags, apparel and vehicles customization, adhesive signs.

Wide-format printers: Proll and Advanced Jet Series.

SJ-645EX uses Eco Sol MAX inks, with a printing area of 160cm., ideal for banner and posters.

SJ-745EX has a printing area of 188cm.

For super-wide format, SJ-1045IS, with a printing area of 260cm, uses EcoSol MAX inks, and AJ-1000 Advanced Jet, the grand format printer that uses EcoXtreme inks and achieves a max print speed of 90 sqm/h.

With its print devices, Roland offers one-year warranty, a year of Roland Care free maintenance and a technical training at our training centres.

Metaza MPX-70

With this compact and noiseless printer you can imprint images on metals and acrylic materials for object customization. The MPX-70 can imprint images for jewelry, trophies, awards, key rings, lighters, nameplates and many other objects. Its versatility and easiness of use make this Photo Impact Printer an indispensable tool for digital communication designers and a new opportunity for gift stores, photo labs and retail kiosks.

SITMA MACHINERY SPA - PAD.7 – STAND C2/D1-C6/D5

**AUTOMATIC WRAPPING MACHINE SITMA 1150-FWI
HIGH SPEED ENVELOPE INSERTER SITMA SM 5**

Sitma's new film wrapper mod. 1150-FWI is rated at up to 15,000 p.p.h. and offers the widest range of wrapping solutions.

Engineered and built utilizing the latest appropriate technology, Sitma provides a machine that accommodates not only demanding applications but operators and maintenance personal as well.

Sitma exhibits a new high capacity envelope inserter to meet the most demanding production requirements from C4, C6 to pocket envelopes.

The new SM15 has been designed with a unique combination of features that guarantee consistency, fast make-readies and high net throughput.

The basic configuration consists of 6 servo-driven single gripper rotary feeders, all prearranged for selective feeding. A special set-up allows feeding of stitched three-side open product. Each feeder has an independent drive and automatic phasing according to product size.

The products are delivered to a dual pusher chain equipped with the break-away pin design. A newly designed "touch screen" panel allows for a minimum make-ready and to preset job menus programmable.

Dual reject gates avoid product jams/stops thus increasing efficiency as they are activated by incomplete sets. Misaligned products or by an incorrect envelope feed. Product insertion is guaranteed by opening the envelope with vacuum and a pair of rotating mechanical openers/guides and the unique movement of the product belts/counterbelts.

After inserting the envelope, it is transferred via a turnover drum and kept in register by dual belt lugs for ink-jet addressing prior to being delivered to a collecting belt or stacker.

SPOT CLUB SNC

BIRTH AND GROWTH OF SOMEBODY WHO IS NOT THE NUMBER 1 BUT ACTS AS THOUGH HE WAS.

The SPOT CLUB advertising was born in January 1991 as serigraphy for the promotional in general. In the course of time we have directed our attention and energies to the textile sector, first as printing and embroidering workers, then also to the transfer and therm-adhesive applications.

To-day we put all our experience at disposal of the customers who buy our neutral article.

FRUIT OF THE LOOM, JHK, ROYAL CUP, ATLANTIS, DGA are the brands that we allocate to serigraph workers , embroiderers and transfer-point with an appreciation in front of competition:

“THE TECHNICAL COMPETENCE AT THE SERVICE OF THE CLIENT”.

A well-stocked storehouse and a very high reliability allow us to deliver goods within 48 hours all over Italy.

Consult us.....and your firm will be grateful.

TECSYS SRL

TECSYS SRL: TECHNOLOGIES FOR VISUAL GRAPH

Tecsys Srl is a company active from several years in the visual graph field, instituting important collaborations, both in the national and international level.

Exclusive distributor of FOREVER, offers a transfer paper complete range for colour laser printers to print personalized images on every kind of support: textiles and rigid surfaces such as mugs, puzzles, metal sheets, glass, plexiglas, wood..

Dealer for the Italian market of SEFA heat presses, presents a complete set of equipments to print through interchangeable accessories also onto objects with different shapes and thickness (caps, mugs, plates, wood boards, lighters, pens...), with the precision and the digital control of the time and temperature settings.

Tecsys Srl focuses its activity on complete sublimation systems: from Epson printers and plotters equipped with CISS (continuous inks supply system) with Sawgrass Rotech sublimation inks, to a wide selection of objects capable of satisfying every request in every field (photographic min-labs, sport awards, gadgets, souvenirs, gifts, advertising..).

News:

- 1) "SUBLISoft": an auto-installing software which sets printer, pagination, colour profile, products templates, clip art and texts to simplify the realization of the printed objects.
- 2) "TRANSFER ECO.-SOLVENT": Tecsys-srl supports the Roland print and cut plotter selling (its dealer) with the newest transfer products FOREVER ECO-SOLVENT in transparent rolls for light textiles and in white and metallic silver base rolls for dark textiles.

TOSH SRL

SERIE LOGICA LINEA FLEXIBLE: FLEXIBILITY WITHOUT LIMITS SERIE LOGICA LINEA HIGH SPEED: HIGH SPEED UNDER CONTROL

Thanks to its over 25 years experience dedicated to pad printing world, TOSH will exhibit some models of its already well known Serie LOGICA.

The high technological contents of these models, as completely electric NC, allow the end user to have at disposal a machine to print from 1 to more colours on small/medium size objects with low cost, improving the pad printing application chance. HIGH SPEED line is mainly dedicated to the customers who need high production cadences (with some models you can obtain till 5.000 cycle/h.).

With this line, TOSH was able to offer high speed on application where pad printing system was excluded by machinery technical limits.

Since few time ago, to print bottles in 6 colours front/back with a printing diameter till 195 mm. with a mechanical cadence of 1.500/2.000 was a target absolutely not supposable. Today, this is a real TOSH goal.

FLEXIBLE LINE, with its extremely compact machines but with large spaces to easily fit auxiliary devices, as pre-treating parts systems (by flame-hardening or crown treatment), turnover devices to print on more sides of the same object, conveyor devices synchronized with drying devices (by hot air, infrared ray or U.V.) is the perfect solution for numerous application.

We must have a distinguished look to the consumable range that TOSH produces:

Pads available in hundreds of standard and special type

Cliché steel and photopolymer made

Inks single and bi-component with a great range of standard colours, but TOSH even offers a fast service for non standard shades

Additives specifically realized for a optimal result of TOSH inks.

WATSON-MARLOW AT MEDPRINT

Watson-Marlow Bredel Pumps, the market leader in peristaltic technology, is displaying its range of peristaltic pumps for print and packaging applications. Watson-Marlow will be showing its established 700 series and the 620 pump which was successfully launched to market last year, as well as a range of OEM products. Watson-Marlow Bredel's peristaltic pumps are now used by a number of leading printing equipment manufacturers including Heidelberg, Man-Roland and Komori, for their gentle pumping action which avoids foaming or other degradation of the fluid - one of the main causes of uneven ink distribution resulting in poor print quality.

700 Series

The 700 series pumps with LoadSure™ technology were developed specifically for the print industry to speed tube changeover between different coating or ink applications. Available with manual or auto control, the pumps feature flow rates up to 2000 litres/hour. An additional 701REX pumphead can be fitted to provide twin-channel pumping where balanced feed and scavenging of ink or coating is required, or to double the flow rate to 4,000 litre/hour.

LoadSure™ elements consist of a short piece of Watson-Marlow Bredel pump tubing with industry standard Cam & Groove connectors. Elements simply snap into place in the pumphead and the Cam & Groove connectors provide a secure pump-to-system interface, enabling low cost, simple and quick installation for customers.

620 Series

For lower, single channel flow rates the 620 series with its range of four different drives providing manual, remote, digital and dosing control options. With improved capacity giving flows up to 18 l/min and a speed range of 0.1 – 265rpm, the 620 provides exceptional levels of performance, accuracy and output for printers. A key feature of 620 pumps is that like the 700 series, they utilise LoadSure™ tube elements to provide accurate and repeatable flow rates, as well as maximum pump uptime, bringing huge benefits over traditional diaphragm, impeller and lobe pumps.

OEM applications

Peristaltic technology is also used extensively on label printing equipment, where up to eight single channel pumpheads are dedicated to individual colours and controlled from one master panel. Watson-Marlow Bredel will be displaying a full range of small and lightweight OEM pumps on its stand.

Peristaltic pumps and the printing industry

The peristaltic pumping principle makes them the ideal choice for the printing industry. The ink or coating being pumped is contained in a tube from source to delivery, which means that lengthy clean-down times are eliminated. Unlike other pump types, peristaltic pumps have no diaphragms, valves or seals which can become blocked or jammed.

There is no 'dead' volume held in the pump and the amount of ink required is minimised - a key requirement with high value materials or low volume print runs. Peristaltic pumps are self-priming and easily reversible, allowing an improved cleaning operation.

WHIMPRINT SNC

WHIMPRINT SHOWS AT MEDPRINT ALL THE LAST NEWS

WHIMPRINT TAKEN THE BIGGEST PLACE OF THE EXHIBITION TO PRESENT THEIR PRODUCTS AND THE BRAND NEW DISPLAYS.

THE WIDE STAND WILL BE DIVIDED IN DIFFERENT PARTS, AND EVERY PART HAS A SPECIFICALLY TEMES. THE MOST IMPORTANT ARE:

ORAFOL...SELF ADHESIVE FILMS:

FOR FIRST TIME WILL BE PRESENTED THE WIDE RANGE ORAFOL! METALLIC, FLUORESCENT AND SATIN COLOURS...GLOSS AND MATT LINE TOO. EXPERTS FROM ORAFOL FARM WILL BE THERE FOR EVERY QUESTIONS YOU HAVE, AND SHOW HOW TO APPLY THE DIFFERENT MATERIALS...TO END WITH A GREAT SURPRISE...BUT THAT'S A SURPRISE!!!

REFLECTIV...FILM FOR SOLAR CONTROL:

THESE FILMS (IN AND/OR OUTDOOR) ARE MADE TO CHANGE PECULIARITIES OF THE WINDOWS: DECORING, COLOURING, FILTERING, PROTECTING, REFLECTING. ARE ABLE TO AVOID SCRATCHES.

PLASTIC SHEETS:

THEY HAVE THE FIRST PLACE AT THE SHOW: VINYLIC AND ACRILIC SHEETS ARE SHOWED TOGETHER, AS SO OTHER KIND OF SHEETS, SHEETS WITH DIFFERENT CHARATERISTICS, BOTH PHYSIQUES AND CHEMICALS. WE WILL ABLE TO SUPPORT YOU THANKS TO OUR FASCINATING BRANDS.

PERSPEX:

A WIDE RANGE OF, CAST, COLOURED, BRIGHT AND LONGLASTING SHEETS. YOU WILL FIND EVEN THE BRAND NEW SERIES OF PRISMEX AND DI-LUX, MADE TO WIDESPREAD LIGHTS.

SIMONA:

THERMOPLASTIC MATERIALS: PVC, SHEETS, POLES , BARS, PROFILES AND JOINTS.

BENCORE:

MACROCELLULAR SHEET SUITABLE FOR DESIGN, ARCHITECTONIC PROJECTS WITH HIGH VISUAL IMPACT.

STANDS AND DISPLAYS FOR P.O.P.

THE ADVERTISE IS EVERYWHERE, AT VISCOM IN MILAN AND IN OUR CATALOGUE "QUESTI SONO I MIEI GIOIELLI" TOO, IN WHICH YOU CAN FIND DISPLAYS, ROLL-UP AND POP-UP SYSTEMS, BANNERS, BRIGHTING SIGNS, TABLE STANDS...OUR LAST FIELD WHO ARE GIVING TO US A GREAT SATISFACTION.

LOOK TO BELIEVE...WE WILL WAITING FOU YOU AT MEDPRINT TO SHOW YOU OUR WIDE RANGE OF PRODUCTS...AND WHY NOT? TO TAKE A COFFEE TOGETHER.....

TECNOGRAF SRL BOOK BINDING EQUIPMENT

TOP QUALITY AND HIGH FLEXIBILITY. EVERYTHING WITHIN ARM'S REACH. SEMI-AUTOMATIC CASING IN LINE "TOWER LINE" BY TECNOGRAF

The purpose of this project was to build a compact, semi-automatic casing-in machine for an extremely wide range of hard cover books and albums in terms of types and sizes, to be produced in small runs. Target of customers: small book binderies, printing houses, specialty binderies and all those binders who cannot afford complete book lines or where conventional book lines are not suitable (because of sizes and quantities requested or because of special type of books) and hand book binders who want to make a step towards the automation of an important operation. The machine is composed of a Head-Tail Band machine called EASY BAND, a Casing-In Machine, named EASY TOWER and a press with joint forming unit, called EASY PRESS. This is TOWER. This is our new concept of Hard Cover Book: new solutions, high quality, new technology applications, small space required and high flexibility.

FONTANAROSA SRL

FNT PRINTERS ITALY SILK-SCREEN MACHINES: THE CUSTOM-MADE PRODUCTION WHICH COMBINES SAVING AND QUALITY SETS OFF IN THE SOUTH

After a thirty-year experience in the marketing of products and machines for silk-screen print in Campania and after more than ten years in the production of machines, Fontanarosa srl (Ltd) is confident to launch at MedPrint a new line of its own and a new brand: FNT Printers Italy. Both the new line and brand are strongly connected to the need for customization that the company has been noticing for years among its clients. Indeed, to standard silk-screen machines FNT Printers adds the production of "custom-made", specially designed, machines, able to meet the specific requests and single needs of the client with no extra charge. The mission of FNT Printers is to avoid useless and onerous adaptations to what the market compels. A mission that significantly eases the access of many young people to the entrepreneurial activity in the silk-screen print sector. At MedPrint, Fontanarosa srl and FNT Printers Italy present new digital-timer IR silk-screen dryers ,small IR silk-screen dryers, UV dryers and TRIS . Development tanks - frameworks, pad printers, hot presses, conical and cylindrical printing machines complete the offer at the exhibition.

All the production and selling is distinguished by rather cut prices, all the staff are distinguished by their technical contribution and attention to the potential customer who demands the meeting of his needs. FNT Printers Italy sets off to make possible and economical what elsewhere takes time and money .
